

# AVYOL ANTI-OZONE WAXES

## (Protective Waxes for Rubber Goods)

Avyol Anti-Ozone Waxes are specially developed to protect rubber products from the harmful effects of ozone, weathering, and surface cracking. By forming a thin, protective wax layer on the surface of rubber, they act as a barrier against atmospheric ozone and ultraviolet exposure. This ensures longer service life and preserves the flexibility, appearance, and performance of rubber goods used in demanding environments.

### Performance Highlights

- Forms a durable surface film that resists ozone attack.
- Provides long-term protection against weathering and cracking.
- Compatible with a wide range of rubber formulations.
- Enhances product lifespan without affecting mechanical properties.
- Effective in both static and dynamic service conditions.

### Typical Specifications (Anti-Ozone Waxes)

Property	Value / Limit	Test Standard
Form	Solid wax (flakes/pellets)	Visual
Melting Point	60 – 80 °C	ASTM D87
Congeaing Point	58 – 76 °C	ASTM D938
Color	White to light yellow	Visual
Functionality	Ozone protection film	Internal QC
